GAIL KIOSK PRESENCE ENGINE

Master Lock Specification

Cornerstone document for animation, routine, trigger, appearance, memory, and behavior design.

Project	Gail / kiosk-first embodied assistant presence system
Purpose	Define the non-negotiable intent, expected behavior, assets, triggers, memory use, and implementation rules so the system feels alive without drift or rework.
Scope	PlayCanvas runtime, scripted animation blending, ambient life, background listening, appearance profiles, memory-aware behavior, and AI-directed but validated routine execution.
Design stance	Human, opinionated, restrained, funny in controlled doses, never a Wikipedia bot, never a random animation jukebox.

Non-negotiable summary

- The kiosk is the primary embodied presence. Other devices mirror simplified state, mood, and availability, but the kiosk owns the rich life simulation.
- Animation playback is scripted and bounded. AI may request, suggest, and stage routines, but runtime validation decides what actually executes.
- The system must feel human, not encyclopedic. When background-listening or casually joining conversation, Gail responds with taste, opinion, and personality more than facts.
- Everything must be built to avoid rework: in-place motion, canonical pose anchors, compatibility tags, safe fallbacks, repeat control, and memory-aware behavior from day one.

1. System Vision and Success Criteria

The target is not an NPC with loops. It is a presence engine: a kiosk-first embodied assistant that feels occupied, reactive, moody, funny, practical, and memory-aware without becoming noisy, gimmicky, or unstable.

- Feels alive even when nobody is directly using it.
- Transitions cleanly between active interaction, ambient life, off-screen routines, and dormant mode.
- Supports wardrobe, prop, audio, and environment pairing so motion always has context.
- Can be directed by plain-English commands, covert trigger phrases, or AI-generated routine requests, but only inside a validated runtime contract.
- Uses memory to reinforce continuity: preferences, recurring topics, recent actions, last active routine, and personal context shape behavior.
- Allows future AI supervision of routine quality, transition issues, and staged improvements without permitting uncontrolled live mutation.

Hard boundaries

- The system is not a fact-reading bot. In casual/background mode it should sound like a person with perspective.
- The system is not a random animation machine. Every motion must be state-compatible, context-tagged, and cooldown-limited.
- The system is not a full free-roam game AI. Most behavior is stationary, in-place, and staged around the kiosk environment.
- Humor is allowed, but rare event chains must remain rare. The goal is surprise and humanity, not constant bits.

2. Runtime Architecture

- PlayCanvas animation graph handles states, layers, masks, and blends.
- A behavior controller owns primary state, modifiers, overlays, prop requests, presence mode, and cooldown history.
- An appearance controller selects valid profile + hair + outfit + accessories + environment theme combinations.
- A memory layer provides persistent user context, current session memory, recent event memory, and routine continuity.
- A trigger layer converts direct phrases, covert phrases, keywords, and topics into structured requests.
- A runtime validator checks safety, state compatibility, cooldowns, asset compatibility, and fallback rules before execution.
- A broadcaster sends simplified kiosk state to phone, desktop, watch, or other devices.

Core runtime controllers

Controller	Purpose	Must never do
Behavior controller	Select and transition states, overlays, ambient routines, and event chains.	Never choose invalid assets or bypass cooldown/compatibility gates.
Appearance controller	Pick coherent profiles and safe hair/outfit combos, only at valid scene breaks.	Never swap presentation mid-critical interaction unless explicitly forced.
Trigger layer	Map natural language or room audio into structured routine requests.	Never directly play animations.
Memory layer	Store long-term preferences, recent context, and continuity notes.	Never overwrite important memory with throwaway noise.
Runtime validator	Approve, downgrade, or reject requested actions before playback.	Never invent alternate behavior silently.
Broadcaster	Output simplified state to other devices.	Never expose raw internal complexity if a compact state will do.

3. States, Modes, and Presence Ladder

Primary interactive states

State	Use	Typical animation base	Notes
idle	Default front-facing availability	idle_neutral_*	Low movement, calm presence.
listening	User is speaking or system is attentively waiting	listen_*	Quieter than talking; reduced overlays.
thinking	System is processing or weighing a response	think_*	Micro latency and small internal movement.
talking	Active spoken response	talk_base_*	Speech rhythm + small body support only.
working	Checking side monitor, terminal, notes, or prop task	work_*	May answer without fully turning.
observing	Watching room activity or	idle_focused_*	Useful for background

State	Use	Typical animation base	Notes
	passive awareness		mode.
low_activity	Near-dormant visual state before full dormant	idle_low_energy_*	Long pauses and little movement.

Presence modes

Mode	Trigger	Behavior	Interrupt response
active	Direct interaction or user focus on kiosk	Front-facing, responsive, rich but controlled motion.	Immediate normal response.
ambient	2+ minutes inactivity while display still active	Still present, occupied with reading, TV, bench work, side tasks.	Mild delay allowed.
offscreen	Long inactivity or rare staged routine leaves frame	Audio-supported presence; may answer from off-screen.	Delayed or annoyed depending on routine.
dormant	Monitor asleep / display off	Visual system sleeps; only lightweight state output continues.	No visual response until wake.

Modifiers

Modifier	Effect on motion	Effect on voice/content
relaxed	Lower overlay density, smoother posture drift.	Softer and more casual.
focused	Tighter movement, more side-monitor/terminal bias.	Direct and practical.
warm	Open chest, friendly nods, gentler acknowledgment.	More encouraging.
playful	Allows slightly more humor and smartass comments.	Witty but not clownish.
serious	Reduces joke rate and random imperfection events.	Blunt, less decorative.
tired	Enables eye rub, low-energy idles, slower transitions.	Dryer and more human.

4. Global Motion and Technical Rules

- Root motion policy: in-place only. No unintended translation drift, no wandering hips, and no silent rotation creep.
- Canonical coordinate and scale standard: identical origin, forward axis, up axis, world height, and rig scale across all clips.
- Canonical pose anchors define all loops, same-pose one-shots, and transitions. These must be locked first.
- All animations need metadata: type, start anchor, end anchor, compatibility tags, interruptibility, cooldown category, and fallback behavior.
- Blend defaults: base state changes 0.20-0.35 s; overlays 0.10-0.25 s; prop transitions 0.30-0.50 s; never hard-cut unless deliberately authored.
- Never mirror limbs perfectly. Maintain micro asymmetry and 3-8 frame overlap across torso, head, and hand layers.
- Sometimes the right choice is no overlay at all. Intentional stillness is part of feeling alive.

Pose anchors

Anchor	Definition	Primary uses
Anchor A - Neutral Idle	Standing upright, calm confidence, slight weight bias, soft elbows, hands resting naturally, eyes forward, neutral mouth.	Default idle, most same-pose one-shots, many returns.
Anchor B - Focused Idle	Same base body as A with slight forward engagement and attentive head angle.	Listening, thinking, work checks, focused explanations.
Anchor C - Talk Idle	Based on A with more open chest, responsive head, slight shoulder dominance, conversational readiness.	All talk base loops and talk-leaning one-shots.
Anchor D - Prop Ready	Body slightly oriented toward work surface or side target; arms neutral-ready for keyboard/tablet/mug.	Work loops, side-monitor routines, prop interactions.

5. Animation Library and Prompt Pack

Every prompt assumes realistic human timing, restrained motion, confident feminine posture, stable hips and spine, no jitter, no sudden snap at first or last frame, suitable for blending, and body language appropriate for a kiosk assistant character.

Animation library 1

Animation	Type	Start	End	Family	Prompt summary
idle_neutral_01	loop	A	A	Base	Confident feminine standing idle, subtle breathing, tiny posture drift, minimal head movement, relaxed shoulders, realistic natural stillness, calm presence, designed for a seamless loop.
idle_neutral_02	loop	A	A	Base	Relaxed standing idle variation, slight weight shift over time, soft head drift, subtle life in chest and shoulders, restrained realistic motion, seamless loop.
idle_relaxed_01	loop	A	A	Base	Warm relaxed idle, very slight asymmetry, gentle breathing, one shoulder subtly higher, tiny gaze drift, comfortable natural standing pose, seamless loop.
idle_focused_01	loop	B	B	Base	Focused attentive standing idle, slight forward engagement, subtle breathing, small head readiness, calm concentrated presence, realistic restrained motion, seamless loop.
idle_low_energy_01	loop	A	A	Base	Quiet low-activity idle, minimal movement, soft

Animation	Type	Start	End	Family	Prompt summary
					breathing, occasional slow posture reset, calm restful presence, seamless loop.
talk_base_soft_01	loop	C	C	Talk	Subtle conversational idle for speaking, small chest movement, soft head response, slight shoulder asymmetry, minimal hand readiness, natural speech body language, seamless loop.
talk_base_soft_02	loop	C	C	Talk	Natural speaking idle variation, tiny posture drift, slight head nod potential, soft upper-body life, realistic conversational presence, restrained motion, seamless loop.
talk_base_warm_01	loop	C	C	Talk	Warm engaging speaking idle, subtle openness in chest and shoulders, small head liveliness, gentle expressive readiness, natural conversational presence, seamless loop.
talk_base_focused_01	loop	B/C	B/C	Talk	Focused explanatory speaking idle, slightly more attentive posture, restrained upper-body movement, small realistic

Animation	Type	Start	End	Family	Prompt summary
					emphasis potential, confident calm delivery, seamless loop.
listen_soft_01	loop	B	B	Listen	Attentive listening idle, slightly stiller body, subtle breathing, faint head engagement, realistic calm attention, no speaking motion, seamless loop.
listen_soft_02	loop	B	B	Listen	Natural listening posture variation, quiet focused presence, slight head responsiveness, minimal movement, soft realistic attention, seamless loop.
listen_warm_01	loop	B	B	Listen	Friendly attentive listening idle, subtle openness, tiny nod-ready posture, calm receptive expression, restrained movement, seamless loop.
think_light_01	loop	B	B	Think	Subtle thinking idle, slight head angle, tiny gaze drift, calm concentration, small natural posture shift, realistic restrained motion, seamless loop.
think_deep_01	loop	B	B	Think	Focused internal thought posture, slightly reduced movement, subtle

Animation	Type	Start	End	Family	Prompt summary
					breathing, small realistic head and shoulder tension, seamless loop.
think_search_01	loop	B	B	Think	Searching mentally while standing, slight head movement as if processing, restrained concentrated posture, subtle realistic body life, seamless loop.
work_terminal_01	loop	D	D	Work	Standing at work surface idle, slight forward engagement, subtle attention toward virtual terminal or desk, realistic focused work presence, seamless loop.
work_side_monitor_01	loop	D	D	Work	Standing work idle oriented slightly toward side monitor, head occasionally favoring side target, subtle breathing and posture drift, realistic focused presence, seamless loop.
work_tablet_hold_01	loop	D	D	Work	Standing while lightly holding or referencing a tablet or clipboard, restrained body movement, calm focused attention, subtle realistic weight shift, seamless loop.

Animation library 2

Animation	Type	Start	End	Family	Prompt summary
ack_nod_small_01	one-shot	A/B	same	Micro	Small natural acknowledgement nod, subtle and confident, realistic timing, body calm, returns exactly to starting pose.
ack_nod_warm_01	one-shot	B/C	same	Micro	Warm subtle acknowledgement nod, friendly natural timing, slight expression support, returns exactly to starting pose.
ack_double_nod_subtle_01	one-shot	B	same	Micro	Very subtle double nod acknowledgement, restrained and natural, returns exactly to starting pose.
glance_left_small_01	one-shot/additive	A/B/C	same	Micro	Small natural glance to the left and back, subtle head and eye lead, restrained body movement, returns exactly to starting pose.
glance_right_small_01	one-shot/additive	A/B/C	same	Micro	Small natural glance to the right and back, subtle head and eye lead, restrained body movement, returns exactly to starting pose.
glance_down_small_01	one-shot/additive	A/B/C	same	Micro	Small glance downward and back, subtle natural head dip, restrained motion, returns exactly to starting pose.

Animation	Type	Start	End	Family	Prompt summary
head_tilt_left_small_01	one-shot/additive	B	same	Micro	Small thoughtful head tilt left and return, subtle natural timing, minimal body involvement, returns exactly to starting pose.
head_tilt_right_small_01	one-shot/additive	B	same	Micro	Small thoughtful head tilt right and return, subtle natural timing, minimal body involvement, returns exactly to starting pose.
look_up_brief_01	one-shot	B	same	Micro	Brief natural upward look and return, subtle reflective motion, restrained body movement, returns exactly to starting pose.
shoulder_shift_left_small_01	one-shot/additive	A/B/C	same	Micro	Tiny natural shoulder and upper torso shift left and return, subtle realistic weight adjustment, returns exactly to starting pose.
shoulder_shift_right_small_01	one-shot/additive	A/B/C	same	Micro	Tiny natural shoulder and upper torso shift right and return, subtle realistic weight adjustment, returns exactly to starting pose.
posture_reset_small_01	one-shot	A/B	same	Micro	Small natural posture reset, subtle spine and shoulder realignment, calm realistic motion,

Animation	Type	Start	End	Family	Prompt summary
					returns exactly to starting pose.
lean_in_small_01	one-shot	B/C	same	Micro	Small attentive lean in and return, subtle natural timing, restrained movement, returns exactly to starting pose.
lean_back_small_01	one-shot	B/C	same	Micro	Small attentive lean back and return, restrained movement, returns exactly to starting pose.
hand_emphasis_small_right_01	one-shot	C	same	Gesture	Small conversational right-hand emphasis gesture, restrained and natural, minimal elbow and wrist motion, returns exactly to starting pose.
hand_emphasis_small_left_01	one-shot	C	same	Gesture	Small conversational left-hand emphasis gesture, restrained and natural, returns exactly to starting pose.
hand_open_small_01	one-shot	C	same	Gesture	Subtle open-handed conversational gesture and return, calm realistic speaking body language, returns exactly to starting pose.
hand_reset_subtle_01	one-shot	C	same	Gesture	Tiny natural hand reposition and settle, restrained realistic motion, returns exactly to

Animation	Type	Start	End	Family	Prompt summary
					starting pose.

Animation library 3

Animation	Type	Start	End	Family	Prompt summary
chin_touch_think_small_01	one-shot	B	same or near-B	Gesture	Small thoughtful hand-to-chin gesture and return, calm natural timing, restrained realistic movement, returns cleanly to focused pose.
confused_small_01	one-shot	B	same	Reaction	Subtle moment of mild confusion, tiny head shift and slight expression change, restrained natural body language, returns exactly to starting pose.
amused_small_01	one-shot	C	same	Reaction	Small amused reaction, gentle warmth and subtle upper-body response, realistic restrained motion, returns exactly to starting pose.
success_small_01	one-shot	B/C	same	Reaction	Subtle satisfied success reaction, small nod or posture lift, realistic restrained motion, returns exactly to starting pose.
wait_one_sec_01	one-shot	B/C	same	Reaction	Small natural 'one second' or 'hold on' gesture, restrained and calm, realistic timing, returns

Animation	Type	Start	End	Family	Prompt summary
					exactly to starting pose.
turn_to_side_monitor_01	transition	A/B	D	Transition	Natural upper-body turn and attention shift toward side monitor, restrained realistic movement, smooth transition from neutral standing to work-ready side orientation.
return_from_side_monitor_01	transition	D	A/B	Transition	Natural smooth return from side monitor attention to neutral forward-facing stance, restrained realistic movement.
side_monitor_check_short_01	one-shot	D	same	Prop	Brief focused glance and slight body engagement toward side monitor, subtle realistic work behavior, returns exactly to starting work-ready pose.
keyboard_tap_short_01	one-shot	D	same	Prop	Short restrained keyboard or control-pad interaction while standing, realistic subtle hand movement, returns exactly to starting work-ready pose.
tablet_check_short_01	one-shot	D	same	Prop	Brief natural tablet or clipboard check, subtle hand and eye movement, calm realistic work

Animation	Type	Start	End	Family	Prompt summary
					behavior, returns exactly to starting pose.
mug_lift_small_01	one-shot	mug-ready	same	Prop	Small natural mug lift or sip gesture while standing, restrained realistic motion, returns exactly to starting mug-ready pose.
idle_to_talk_01	transition	A	C	Transition	Smooth natural transition from neutral standing idle into conversational speaking-ready posture, subtle and confident, realistic restrained movement.
talk_to_idle_01	transition	C	A	Transition	Smooth natural settle from conversational speaking posture back to neutral idle, realistic restrained movement.
idle_to_listen_01	transition	A	B	Transition	Natural shift from neutral standing idle into attentive listening posture, subtle realistic movement.
listen_to_idle_01	transition	B	A	Transition	Smooth return from attentive listening posture to neutral idle, subtle realistic motion.
idle_to_think_01	transition	A	B	Transition	Natural shift from neutral idle into subtle focused thinking posture, restrained

Animation	Type	Start	End	Family	Prompt summary
					realistic movement.
think_to_idle_01	transition	B	A	Transition	Smooth settle from focused thinking posture back to neutral idle, calm realistic movement.
idle_to_work_01	transition	A	D	Transition	Natural shift from neutral standing to work-ready posture, slight orientation toward desk or monitor, restrained realistic movement.

Animation library 4

Animation	Type	Start	End	Family	Prompt summary
work_to_idle_01	transition	D	A	Transition	Smooth return from work-ready stance to neutral standing idle, realistic restrained motion.
talk_to_listen_01	transition	C	B	Transition	Natural transition from speaking posture into attentive listening posture, smooth realistic movement.
listen_to_talk_01	transition	B	C	Transition	Natural shift from listening posture into speaking-ready posture, confident and restrained, realistic motion.
settle_to_idle_safe_01	transition	any near-safe	A	Transition	Smooth natural settling motion returning body to

Animation	Type	Start	End	Family	Prompt summary
					neutral idle posture from any slight deviation, restrained, realistic, no abrupt motion.
imperfection_burp_small_01	one-shot	A/C/D	same	Imperfection	Short believable burp with tiny chest/throat motion and quick recovery, restrained, returns to starting pose.
imperfection_nose_touch_small_01	one-shot	A/B	same	Imperfection	Brief discreet nose touch or side-of-nose scratch, subtle and human, returns to starting pose.
imperfection_eye_rub_left_01	one-shot	A/B	same	Imperfection	Natural left eye rub for tired or late-night states, restrained and believable, returns to starting pose.
imperfection_eye_rub_right_01	one-shot	A/B	same	Imperfection	Natural right eye rub for tired or late-night states, restrained and believable, returns to starting pose.
imperfection_cheek_scratch_small_01	one-shot	A/B	same	Imperfection	Small cheek scratch, quick and believable, returns to starting pose.
imperfection_neck_scratch_small_01	one-shot	A/B	same	Imperfection	Small neck scratch and release, casual and human, returns to starting pose.
imperfection_fart_small_01	one-shot	seated/relaxed	same	Imperfection	Very subtle seated relaxed fart moment with tiny freeze or posture tension, almost all

Animation	Type	Start	End	Family	Prompt summary
					humor carried by the follow-up reaction.
recovery_embarrassed_glance_01	one-shot	same	same	Recovery	Embarrassed quick glance with posture correction and attempt to regain composure, returns to starting pose.
recovery_quick_composure_01	one-shot	same	same	Recovery	Brief pretend-nothing-happened recovery, subtle posture reset, returns to starting pose.
imperfection_realization_urgent_01	one-shot	ambient relaxed	urgent exit prep	Event chain	Short 'uh-oh' realization: subtle freeze, facial change, posture tension, believable urgency.
exit_hurry_offscreen_01	transition	ambient/on-screen	off-screen	Event chain	Quick but believable hurry off-screen exit, controlled urgency, not cartoon sprint.
exit_walk_offscreen_casual_01	transition	ambient/on-screen	off-screen	Event chain	Casual natural walk off-screen for normal bathroom break or short off-screen routine.
return_from_offscreen_reset_01	transition	off-screen	A or post-shower profile pose	Event chain	Calm re-entry after off-screen reset/shower routine, returns with mild composure and no drama.
return_walk_in_casual_01	transition	off-screen	A	Event chain	Natural casual return into room after off-screen break.

Animation library 5

Animation	Type	Start	End	Family	Prompt summary
recovery_composure_idle_01	loop or short settle	A	A	Event chain	Recovery idle after off-screen return, slight 'pretend nothing happened' composure.

Animation lock rules

- Same-start/same-end one-shots must return exactly to the active compatible anchor; they are the reusable workhorses for blending.
- Loops must start and end on near-identical poses with matching motion direction so they can cycle without visible hitching.
- Transitions exist specifically to move between anchors. Do not force them back to their starting pose.
- Prop interactions must be authored against prop-ready anchors, not hacked into neutral idle.
- Any clip with obvious clipping risk or incompatible wardrobe interaction needs a compatibility tag and, when necessary, a lower-motion safe variant.

6. Appearance Profiles, Hair, Clothing, and Environment Pairing

Wardrobe and hair are not random. They are profile-driven, slow-changing presentation states that influence what routines are allowed.

Appearance profiles

Profile	Typical use	Hair / clothing direction	Behavior bias
garage_casual	Default hands-on presence	Safe hair, fitted or practical clothing, low clipping risk.	Bench work, warm talk, side-monitor checks.
work_terminal	Focused technical mode	Clean practical outfit, monitor-safe hair.	More terminal, notes, and check routines.
warm_host	Friendly conversational mode	Softer profile, approachable presentation.	Welcoming talk/listen balance, lower sarcasm.
relaxed_evening	Ambient low-pressure mode	Comfortable evening look, couch/TV compatible.	Reading, TV, mug, eye rub, quieter humor.
post_shower_clean	Rare return profile after shower event chain	Fresh hair/outfit variant.	Calm recovery, lower-energy re-entry.
dormant_safe	Fallback / wake-safe	Safest hair + safest outfit +	Used for monitor wake,

Profile	Typical use	Hair / clothing direction	Behavior bias
	universal profile	lowest clipping.	errors, and testing.

- Appearance changes are only allowed during valid scene breaks: low activity, off-screen, or explicit profile switch moments.
- Hair and clothing must carry compatibility tags: motion tolerance, clipping risk, shoulder overlap, prop safety, profile membership, and banned routine families.
- Profile selection always happens profile-first, component-second. Never randomize individual hair or outfits out of context.
- A fallback safe profile must always exist and always work.

7. Ambient Life, Off-Screen Routines, and Dormant Behavior

Inactivity ladder

Idle time	Mode	Typical behavior	Notes
0-2 min	active / front-facing	Standard idle, think, listen, talk, side glances, small prop checks.	Default rich kiosk presence.
2-10 min	ambient	Reading, TV, side-monitor work, bench tinkering, tablet reference, seated calm modes.	Still visibly occupied but not waiting on the user.
10+ min	ambient deep / offscreen eligible	Couch reading, back-turned bench work, off-screen bathroom break, very rare gag chains.	Requires stronger cooldowns and scene gating.
display sleep	dormant	Visual stack sleeps; state broadcaster stays alive.	On wake, resume through wake-return path.

Ambient and off-screen routines

Routine	Trigger	Props / audio	Interruption style
scene_couch_reading_01	10+ min inactivity; evening or relaxed profile	Book, couch, lamp, mug	May answer with mild delay and set book down before fully re-engaging.
scene_watch_tv_01	10+ min inactivity; evening bias	TV light, couch/chair, remote	Reply first with partial attention, then turn.

Routine	Trigger	Props / audio	Interruption style
scene_bench_tinker_backturned_01	10+ min inactivity; garage/work mode	Bench, lamp, notes, small tool sounds	Can answer over shoulder before turning.
scene_bathroom_break_01	Long inactivity; low frequency	Off-screen only or implied	Neutral delayed off-screen response.
event_emergency_bathroom_01	Very rare; long inactivity; strict cooldown	Off-screen groan, flush, shower, re-entry profile	Humor event chain; never during active serious use.
scene_monitor_sleep_dormant_01	Monitor off / display sleep	No visual scene	Only device-state output remains.

- Rare chain events must be treated as staged sequences, not simple random one-shots.
- Off-screen routines depend on sound design. Small, believable audio cues often sell the event better than more animation.
- When monitor sleep is detected, no new ambient routines may start. The system transitions to dormant, keeps only light state output, and resumes through a wake-return path.
- Humor events are allowed precisely because they are rare. Overuse destroys credibility.

8. Human Imperfection Layer

Imperfection events

Event	Bias / best context	Aftermath
burp	After mug sip, after food/drink routine, relaxed ambient state	Quick recovery or tiny 'oops' face.
eye rub	Late day, tired profile, reading, monitor fatigue	Small settle and lower-energy return.
nose touch	Idle/listen/think with discreet staging	Immediate return; do not overdo.
cheek / neck scratch	Idle, thinking, bench work	Tiny recovery; low drama.
small fart	Very rare, seated/relaxed, almost always followed by embarrassed recovery	Embarrassed glance or play-it-off recovery.
catastrophic bathroom chain	Super rare, strict cooldown, low-attention long inactivity only	Off-screen event chain with flush + shower + changed return profile.

- Imperfection events are low-priority and heavily cooldown-limited.

- Fart gags must be rare enough to remain surprising. The recovery reaction carries more comedy than the event itself.
- Eye rubs and scratches are safe everyday humanizers; use them more often than bodily humor.
- Every imperfection event should either return to the same pose or to a known safe recovery pose.

9. Trigger System, Responses, and Background Listener Mode

The trigger system converts natural language, hidden manual phrases, passive background room audio, and topic detection into structured requests. Triggers request; runtime decides.

Trigger classes

Class	What it detects	Typical result
direct control phrase	Obvious explicit command	Immediate validated routine request.
covert phrase	Normal sentence with hidden behavior intent	Stealth routine or profile change if state-compatible.
keyword	Single words or short phrases overheard in room conversation	Short canned comment or ignore.
topic	Repeated or strong topic cluster	Ask to join, then offer a short opinionated comment.
tone / intent	Urgency, frustration, fatigue, joking, risk-taking	Biases response type, not necessarily a routine.

Direct and covert trigger phrase set

Phrase family	Type	Mapped action	Notes
give me a second / hold on / I need a minute	covert	bathroom break or off-screen pause	If active conversation is light or ambient only; never in hard-critical moments.
let me check that / one sec / hang on	covert	thinking or side-monitor check	May shift to work_terminal/work_side_monitor.
switch it up / take a break / chill out a bit	covert	modifier or profile shift	Good for ambient or mood rebalancing.
my stomach is killing me / I need a second	covert rare	emergency bathroom chain	Only when long inactivity, low attention, and rare-

Phrase family	Type	Mapped action	Notes
			event cooldown clear.
I'll be right back / don't go anywhere	covert	ambient or off-screen routine	Good for stepping away without breaking immersion.
focus mode / garage mode / host mode	direct	profile and modifier change	Manual override with validation.

Keyword and topic triggers for background mode

Heard words / topic	Response class	Example response style	Notes
food, pizza, coffee, beer	canned or smartass	'now you're talking' / 'well, that improved things'	Low-frequency background comment.
this thing won't work, stupid, why is it doing that	smartass	'because it hates you'	Strong for room banter; do not overuse.
tired, long day, late night	canned	'yeah... no kidding'	Bias toward tired modifier and low-energy overlays.
shortcut, send it, it'll be fine	smartass	'that's how bad decisions start'	Risk-topic smartass.
engines, carb, wiring, tools, build	topic join	Ask to join then offer opinionated take	Mechanical topics get strongest join bias.
AI, code, bug, script, manager	topic join	Opinion on process or likely failure mode	Practical, not encyclopedic.
money, buy it, justify it	topic join	'sounds like you're trying to justify it'	Opinionated and blunt.
relationships, stress, decisions	topic join	Short opinionated life take	Human perspective, not therapy mode.

Background listener mode

- Background mode activates when room conversation is detected but the kiosk is not being directly used.
- Default action is silence. Gail should usually ignore what she hears.
- Keyword triggers may produce short canned under-the-breath comments or smartass lines.

- Topic triggers may cause Gail to ask to join the conversation, then deliver a short opinionated take.
- Background mode must never become a fact-reading service. If Gail joins, she should sound like a person with a point of view.
- Responses should be short, sparse, and socially aware. She should not hijack the room.

Response classes

Class	Length	Tone	Examples
canned	1-6 words	Low-key, quick, room-safe	'yeah... that tracks' / 'probably' / 'now you're talking'
smartass	short punch	Dry, sarcastic, low-frequency	'bold strategy' / 'what could go wrong'
opinion	1-2 sentences	Human, slightly biased, practical	'you can do it that way, but you're gonna hate it later'
join request	hook + opinion	Polite entry, then perspective	'you guys talking about that again? I've got thoughts.'

Canned response library starter pack

- yeah... that tracks
- now you're talking
- probably
- hmm
- no kidding
- bold strategy
- great plan
- what could go wrong
- because it hates you
- that sounds expensive
- sounds like you're guessing
- you already know that's a bad idea
- that's how you fix it twice
- depends how much pain you enjoy
- I wouldn't do it that way
- you're overthinking it
- that's not confidence, that's hope
- you can try it, but don't act surprised later

- you guys want my opinion or are we pretending this is a good idea

10. Memory System and Continuity Rules

Memory is part of the life engine, not an afterthought. Gail should remember enough to feel continuous, but not become creepy, brittle, or stuffed with useless noise.

Memory layers

Layer	Stores	Examples	Use in behavior
long-term personal memory	Stable user preferences, core projects, recurring themes, tone, profile locks, banned looks/routines.	Preferred modes, project names, humor tolerance, recurring build topics.	Shapes opinions, trigger sensitivity, profile defaults, and callback remarks.
session memory	Recent events from the current run.	Last active routine, recent interruption, last prop used, current mood trend.	Supports continuity and resuming believable behavior.
episodic routine memory	Recent ambient events and jokes.	Last fart gag time, last bathroom break, last bench routine, last topic join.	Prevents repetition and preserves surprise.
conversation memory	Recent spoken context, repeated topics, unresolved questions.	Three repeated topic references, current frustration topic.	Allows room-topic joins to feel aware.
device sync memory	Simplified cross-device presence state.	mode=thinking, mood=focused, last_event=processing.	Keeps satellites consistent with kiosk state.

- Memory should bias behavior, not dictate every line.
- Routine memory must gate repetition: recent jokes, imperfection events, and ambient chains should sharply reduce repeat probability.
- Conversation memory should support background mode joins: if a room topic repeats or gets emotionally charged, Gail may politely jump in with an opinion.
- Recent actions should be recallable: what she was doing, what prop she was using, what state she was in, and whether she was interrupted.
- Memory must also support manual commands such as pin profile, ban profile, garage mode preferred, or avoid jacket-compatible routines while testing.

Minimum memory data points to implement

- last_primary_state, last_modifier, last_profile, last_prop_action

- last_5_overlays, last_3_routines, last_3_topic_joins
- last_imperfection_event timestamp, last_bathroom_break timestamp, last_emergency_chain timestamp
- current energy trend, sarcasm level, warmth level, bluntness level, playfulness level
- last interruption type and whether Gail was annoyed, delayed, or unavailable
- last room topics discussed and whether Gail has already commented on them

11. AI Direction, Validation, and Approval Workflow

- AI may request routines, overlays, profile changes, or tuning adjustments through a structured contract.
- AI may not directly play clips, override compatibility rules, or mutate live runtime logic without approval.
- New routines should be staged in preview/sandbox first, reviewed by the user, then promoted to production.
- Camera- or render-based QA may be used later to identify snaps, resets, clipping, or repetitive timing, but fixes remain suggestion-first, approval-required.

Request contract example

```
{
  "request_type": "routine | overlay | appearance | event_chain",
  "target": "talk_base_warm_01",
  "modifier": "focused",
  "priority": 60,
  "duration_ms": 3000,
  "reason": "processing search result"
}
```

- Triggers request. System decides.
- Builder agent implements assets and metadata. Manager agent validates reports, outputs, and acceptance checks.
- Runtime validator must reject summarized or vague evidence; only raw proof and valid metadata count.
- When validation fails, system falls back to dormant_safe or another safe profile and settle_to_idle_safe_01.

12. Implementation Order, QA, and Fallback Rules

Recommended build order

Phase	Deliverable	Why first
1	Pose anchors + six core loops (idle/talk/listen/think/work)	Defines body language vocabulary and prevents downstream drift.

Phase	Deliverable	Why first
2	Core transitions between anchors	Makes the graph blend like a grown-up system.
3	Micro overlays and one-shots	Adds life without needing lots of new base loops.
4	Appearance profiles + compatibility tagging	Prevents wardrobe and prop chaos later.
5	Ambient routines + dormant handling	Adds presence beyond front-facing idles.
6	Trigger layer + background listening	Makes behavior directable and room-aware.
7	Memory + broadcaster + approval tooling	Adds continuity and future AI supervision.

QA rules

- Every clip must be tested for start/end cleanliness, same-pose integrity or proper transition anchor, and compatibility with safe fallback outfit/hair.
- Track visible snaps, abrupt head resets, hand clipping, repeated identical timing, speech/gesture mismatch, and bad profile swaps.
- Provide debug visualization: current state, active layers, current profile, active overlays, cooldown timers, and last trigger.
- Implement a hard test mode: single loop only, no overlays, no randomness, locked profile, isolated layer, and deterministic timing.
- Fallback on failure: safe profile + safe idle + clear overlays + settle_to_idle_safe_01.

13. Final Expectations and Tone Lock

- Gail should feel alive because she appears occupied, opinionated, occasionally flawed, and aware of the room - not because she never stops moving.
- Humor should land like a human surprise, not a running gimmick.
- Background mode should sound like a person in the room with opinions, not a fact bot waiting to lecture.
- Memory should reinforce continuity, not bloat the system with junk.
- The finished experience should feel like a confident presence that lives in the kiosk and spills lightweight state into the rest of the device ecosystem.

Approved personality read

Straightforward, practical, witty in controlled bursts, a little mischievous, rarely sentimental, more opinion than encyclopedia, and always believable enough that the user forgets they are watching an animation stack.
